

Antifoams For Kosher Food Production

Basildon's range of Kosher products are all made under the close supervision of Rabbis from the Manchester Beth-Din.

Basildon Chemicals offer a range of Kosher antifoams, certified as Kosher by the Manchester Beth-Din and manufactured under their supervision. The products are packed in drums displaying the Kosher markings of the Beth-Din and a Kosher certificate is issued containing the batch numbers of the product.

These products are modified versions of standard food grade antifoams and are therefore acceptable under UK, EU and US food regulations. They contain no animal derived or genetically modified ingredients.

All these kosher products are classified 'Kosher Parev' with some of them (where indicated) classified as Kosher for Passover.

Certification

Basildon Chemical's Kosher products are covered by an annual certificate issued by Manchester Beth Din.

Products manufactured as Kosher for Passover are manufactured in batches which are individually supervised and certified by presence of a Rabbi from Manchester Beth Din

Antifoam C100K

This is a 100% active silicone antifoam which is mainly used in vegetable processing and other non-aqueous food applications. May also be certified as Kosher for Passover.

Antifoam FD30K

A 30% silicone emulsion for general food processing applications where a concentrated product is required. May also be certified Kosher for Passover.

Antifoam FDK

A 10% silicone emulsion for general food applications. An effective and economical solution to a wide range of foaming problems. May also be certified as Kosher for Passover.

Antifoam FDV2K

A combination silicone / non-silicone antifoam emulsion for use in high starch & high solids foaming systems.

Antifoam 98/007K

A 100% active combination silicone / non-silicone antifoam which is mainly used in fermentation applications. Stable under heat sterilisation.

For more information on individual products, see the relevant product data sheet.
