**Description**
Foam-Clear IndaPro-E is a highly effective silicone based antifoam emulsion which has been developed for use in industrial applications where quick knockdown of foam is required. It offers outstanding reliability and versatility, is highly effective, enabling attainment of foam control and in easy-to-use emulsion form.

**Method of Use**
Foam-Clear IndaPro-E disperses easily in both hot and cold aqueous systems, requiring only mild agitation to disperse it completely in the foaming system. For maximum efficiency and economy we recommend the antifoam be diluted with water before use, in the ratio of one part of IndaPro-E to nine parts of cool soft or deionised water, the water being added slowly to the antifoam with continual low shear agitation. The quantity of antifoam required can only be found by experiment. In general between 100 and 500ppm of the product is all that is required (500ppm = 0.5 litres of product per 1000 litres of foaming media).

**Applications**
Foam-Clear IndaPro-E is recommended for a wide variety of aqueous processes (for non-aqueous applications we normally recommend Antifoam C100, including the following: Chemical manufacturing & formulations. Water & effluent treatment. It is effective in many processing applications where its efficiency and speed of knockdown make it a very versatile foam control agent.

In manufacturing of a wide range of chemicals and subsequent compounding and formulating, this product offers many advantages. As well as its effectiveness, the inert nature of the product and the low levels of addition mean that there will be minimal interference in the process and subsequent applications. The product is ideally suited for use in water and effluent treatment. It is easily diluted with water making addition easy. Its non-toxic properties mean little interference with biological treatment processes.

**Toxicity and Handling**
The components of IndaPro-E have a very low order of toxicity, although prolonged contact with the skin or contact with the eyes may cause some irritation. See our Antifoam Health and Safety sheet for more information.
Storage and Shelf Life
The product should be stored below 32°C and ideally should not be allowed to freeze. Shelf life of the unopened container is 12 months from date of manufacture.
